9 – 12 November 2017

PROVISIONAL SCIENTIFIC PROGRAMME NOW AVAILABLE

Pre-Congress Workshops

- **CVD Imbizo:** Cardiovascular Disease is poised to be the next medical pandemic to affect South Africa and low and middle-income countries all over the world. Critical thinking is required to avert this in our country and we need to act swiftly to institute fundamental interventions to address this. This Imbizo is dedicated to exploring solutions and considering new innovative methods to prepare for the future. It is aimed at members of the public and press, cardiovascular community, private organisations interested in solution-driven healthcare and those involved in teaching and training
- **Cardiology for the Non-Cardiologist:** The workshop for Non-cardiologists will inform delegates who are not involved on a daily basis in the field of Cardiology about new and innovative managements of both interesting and common cardiovascular diseases. Given by experts who are up to date with new treatments and to allow for interactive discussion concerning current management
- **Echocardiography:** The annual CISSA echocardiography workshop will again cover a wide range of topics in echocardiography, predominantly focussed on transthoracic echocardiography. All health care workers involved in echocardiography are invited to attend. The programme will benefit echocardiographers of different skill levels and we are convinced that both experienced imagers and those starting out in echo will benefit from this full day workshop
- **Cardiac Surgical:** Programme to follow

ONLINE REGISTRATION & SUBMISSION OF ABSTRACT OPEN

Individual and Group registration available online - Early Bird Registration closes 31 July

Urgent Reminder. Call for Submission of Abstracts – Deadline 10 July

Categories for Submission

- Adult cardiology
- Arrhythmia
