

12 July 2021

Whom it may concern,

**Renoguard Motivation**

Having reviewed current management strategies in patients with chronic kidney disease undergoing cardiac interventions, available data indicate the benefits of the Renal Guard System over standard treatment practices in the prevention of contrast-induced nephropathy.

SASCI endorses use of the device in patients with a Mehran Score  $\geq 11$ , at the discretion of the attending clinician.

Please do feel free to approach me or SASCI through George Nel at the SASCI Office if more details are needed.

Regards

Dr Graham Cassel

SASCI Secretary and cardiologist at Milpark Hospital
